A. Bloodborne Pathogens (BBP) – Exposure Control Plan

The Company has established a written BBP Plan and Program to control potential exposures to bloodborne pathogens such as the HIV or Hepatitis B virus. The Company has determined that its "designated first aid providers," that is, employees and/or contractors, whom the Company has designated to perform the duty of providing first aid and clean up of small amounts of blood or other potentially infectious materials, may incur BBP exposure. Accordingly, the Company expects designated first aid providers to be trained to understand BBP exposure and to implement the Company's BBP plan. Basic information is provided to all employees and/or contractors regarding BBP during orientation. BBP incidents are to be reported immediately to a Supervisor and/or a Safety Manager.

The bloodborne pathogen program is designed to minimize or eliminate personnel exposure to bloodborne pathogens. Bloodborne Pathogens are microorganisms present in the human blood and other body fluids that can cause and carry diseases including Human Immunodeficiency Virus (HIV) and Hepatitis B Virus (HBV).

The bloodborne pathogen program will be Available to all employees / contractors though the KPAEHS Resources Page on their mobile devices.

- **Safety Precautions**

  Personnel exposed to blood or other potentially infectious materials have the potential for contacting Human Immunodeficiency Virus (HIV) and/or Hepatitis B Virus (HBV). The company utilizes universal precautions (*i.e.*, an approach to infection control under which all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens) to prevent contact with

  blood or other potentially infectious materials. All blood and other potentially infectious material is considered infectious regardless of the perceived status of the source individual. The following information will be used as guidelines for safety precautions:

  - All human blood and body fluids are considered infectious for Human Immunodeficiency Virus (HIV) and Hepatitis B Virus (HBV) and other bloodborne pathogens.
  - Only trained and qualified personnel administer emergency and/or first aid medical care.
  - Unprotected contact with blood and body fluids and other potentially infectious materials is not authorized.
  - All regulated waste is disposed of in appropriate containers and removed by or according to the procedures of an approved medical waste disposal company.
  - All employees and/or contractors should warn all other persons of the consequences of exposure of human blood and body fluids if an incident occurs.

  If an incident occurs:

  - Employees and/or contractors are to use appropriate barrier precautions to prevent skin and mucous membrane exposure when in contact with blood or body fluids. This may include latex gloves, barrier masks for CPR, or other personal protective clothing as needed.
  - Hands and other potentially contaminated skin shall be washed and/or sanitized immediately after providing first aid.
  - Any garments penetrated by blood are to be removed as soon as possible. Additionally, all skin is to be washed with soap and water after contact with blood or other body fluids.
  - The employee needs to shower and change clothes if contaminated by blood or body fluids.

- All contaminated personal protective equipment is to be removed and disposed of in a designated container for disposal.

- Items contaminated with blood, such as gloves, bandages, paper towels, and any other materials are to be placed in a biohazard container or red plastic bag appropriately labeled as "Biohazard" and sealed.

For additional documentation regarding exposure control procedures refer to the **Exposure Control Plan** maintained by the Safety Team.

B. Access to Employee Exposure and Medical Records

The Company endeavors to take appropriate steps to recognize, assess, and control potential occupational exposures to personnel. Pursuant to 29 CFR, Subtitle B, 1910.1020 employees and/or contractors and their representatives have the right to access exposure and medical records generated as a result of exposure to toxic substances or harmful physical agents.

Generally, the Company's operations do not require its employees and/or contractors to come in contact with toxic substances or harmful physical agents. However, in the event of an exposure involving a situation different from typical, non-occupational situations or if information is provided to the Company relative to an employee's exposure prior to employment with the Company, a representative from the Safety Team will take the necessary steps to comply with the relevant parts of the OSHA standard mentioned above concerning toxic and hazardous substances.

Any required medical records, such as those involving a bloodborne pathogen exposure, will be stored at the Marshall office and will be preserved and maintained for at least the duration of employment plus thirty (30) years. Any occupational exposures should be reported immediately to a member of the Safety Team. All reported incidents of exposure will be evaluated by an Occupational Medicine Clinic or similar facility and an action plan designed by them will be followed. Upon review by the appropriate medical personnel, an occupational exposure record may be initiated by the Company and maintained in accordance with standard policies and regulations.

- **BBP - Personal Protective Equipment**

The following PPE, in appropriate sizes, will be provided free of charge to all employees with a determined exposure to possible pathogen containing body fluids:

- Disposable surgical gloves
- Eye protection or face shield
- Mouthpiece, resuscitation bag, pocket mask or other ventilation device when there is an exposure to blood or other potentially infectious materials.
- PPE will be inspected, repaired and replaced as necessary to maintain its effectiveness.
- All PPE must be cleaned, laundered or properly disposed of as circumstances dictate.

- **Exposure Precautions**

Hand Washing Facilities means a facility providing an adequate supply of running potable water, soap and single use towels or hot air drying machines where the possibility of Exposure Bloodborne Pathogens is possible. Thoroughly wash hands with a non-abrasive soap and running water. If running water is not available, use an antiseptic hand cleanser or antiseptic towelettes until you are able to wash with soap and running water.

- **Exposure Precautions & Cleaning**

Thoroughly wash any contaminated surfaces of equipment or material with soap and water. (Cleaning materials, i.e., sponges, rags, etc., must be disposed of in designated container.)

- **Hepatitis B Virus Vaccinations**

As required by Policy on HIV and HBV, all Rig Runner Inc. personnel who have contact with potentially infectious body fluids must be immunized against hepatitis B or be able to demonstrate immunity. In accordance with the standard, Rig Runner Inc. shall be responsible for establishing procedures such that all employees who have occupational exposure can obtain hepatitis B vaccinations at no cost to them. The vaccination shall be made available after the employee has received training in accordance with this policy and, within 10 working days of assignment to duty, unless immunity has been established or the vaccine is contraindicated for medical reasons.
