VI. Training and Development

A. Approach to Training

The Company endeavors to provide introductory training, on the job training, and continuing education. The Safety Team is charged with the responsibility of providing relevant and essential training on a variety of topics. If any employee and/or contractor ever feels that they are being asked to perform a job for which they have not been sufficiently trained, he/she should consult a Supervisor, Manager or Safety Manager. Ongoing training, or remedial training, will be accomplished at the discretion of the Safety Team and will be documented accordingly.

B. New Employee/Contractor Orientation

Each new employee and/or contractor is taken through a comprehensive orientation program. New employees and/or contractors are required to have initial training relative to their job function and an explanation of the Company's relevant safety expectations. Each new employee is also required to acknowledge familiarity with and receipt of this handbook. Each commercial motor vehicle driver is also required to acknowledge receipt of a copy of the Federal Motor Carrier Safety Regulations Pocketbook and the Emergency Response Guidebook (Hazmat- endorsed Drivers only).

C. PPE Training

The Company provides training to each employee who is required to utilize PPE. Each employee and/or contractor should know when and what PPE is necessary; how to properly don, doff, adjust, and wear PPE; the limitations of the PPE; and, the proper care, maintenance, useful life and disposal of PPE. Affected employees and/or contractors need to demonstrate an understanding of this training, and the ability to use PPE properly, before performing work for the Company.

If and when the Company has reason to believe that any affected employee and/or contractor who has already been trained does not have the understanding and skill required to properly use an item of PPE, the employee and/or contractor needs to be retrained. Circumstances where retraining is required include, but are not limited to, situations where:

- changes in the workplace render previous training obsolete; or
- changes in the types of PPE to be used render previous training obsolete; or
- inadequacies in an affected employee's knowledge or use of assigned PPE indicate that the employee and/or contractor has not retained the requisite understanding or skill.

The Company will maintain documentation of each employee and/or contractor trained and the date(s) of training.

D. Fire Extinguisher Training

The Company will endeavor to provide fire extinguisher training upon initial employment and at least annually thereafter including basic fire recognition, types of fires, types of extinguishers, proper use of extinguishers and hazards involved. It should be noted that fire extinguishers are to be utilized only if it is safe to do so, and will not subject the employee and/or contractor to unnecessary harm. Fire extinguishers are provided to put out small, manageable fires. Every effort must be made to ensure the safety of all employees and/or contractors. Property and equipment are secondary concerns in the event of a fire.

E. Hazard Assessment

A hazard assessment of the workplace must be performed to determine if hazards are likely or may be present that necessitate the use of PPE. Refer to 29 CFR Subpart I, Appendix B, to determine the proper method for conducting an assessment. Hazard assessments must be reviewed to determine proper PPE selection and reason for selection should be available to the employee.

F. Inspection of Use

Personal protective equipment must be sized to fit the employee including proper donning, doffing, cleaning, and maintenance. It shall be visually inspected before each use to assure that defective PPE is not used. Additionally, PPE required by reasons of hazards of processes or environment to protect body parts from inhalation, absorption or physical contact must be provided, used and maintained in a sanitary and reliable condition.
